The aim of the present study was to selectively target a beta-emitter-labelled octreotide analogue to somatostatin (SRIF)-receptor-expressing tumours and to evaluate the feasibility of SRIF-receptor-mediated radiotherapy by delivering a lethal dose of radiation to the tumour. The most promising comp ...

Given this vast array of effects, it is not surprising that somatostatin has been the subject of intensive investigation. The development of synthetic analogues has led to treatment of clinical disorders such as acromegaly, hormone-secreting tumors of the gastrointestinal tract, and portal hypertensive bleeding.

Somatostatin analogues are drugs that stop your body from making too many hormones. Some neuroendocrine tumours (NETs) make large amounts of hormones that cause a group of symptoms called carcinoid syndrome. Somatostatin analogues are a possible treatment for people with carcinoid syndrome. Find out more about carcinoid syndrome
